EDUCATION

2022 – 2026

- B.tech computer science and engineering
Rai University (Ahmedabad)

WORK EXPERIENCE

- DevOps Engineer 2024 – 2025

- DevOps Tools & Technologies: Docker, Jenkins, Kubernetes(basic), CI/CD, Linux
- AWS (EC2, S3, IAM, RDS, Lambda, EventBridge, SSM)

PROJECTS

- DevOps Project Hands-on Experience

1. Production-Grade CI/CD Pipeline (Jenkins | Docker | GitHub)

CI/CD Pipeline (Jenkins, Docker, GitHub)

- Automated build → test → deploy pipeline triggered via GitHub webhooks
- Implemented zero-downtime deployment with health checks and rollback
- Built Docker image pipeline with versioning (N/N-1 strategy)
- Solved real issues: Docker permissions, credential security, rollback failures

Result:

- 100% automated deployment, no manual intervention

2. AWS Automated Database Backup System (Lambda | SSM | EC2 | S3)

Designed a state-aware backup automation system:

- Checked EC2 state before execution (running/stopped)
- Started instance dynamically only when required
- Executed PostgreSQL pg_dump using AWS SSM (no SSH)
- Uploaded backups securely to S3 using IAM roles
- Validated backup success before cleanup
- Stopped EC2 only if started by automation (cost optimization)

Handled real-world failures:

- S3 AccessDenied (IAM policy debugging)
- EC2 IAM role issue (IMDS credential failure)
- SSM execution errors and retries

Result:

- Fully automated backup system with zero manual intervention
- Cost-efficient and secure architecture

“

DevOps Engineer focused on building automated, reliable, and cost-efficient systems.

Experienced in designing CI/CD pipelines, cloud automation on AWS, and failure-resilient deployment workflows. Built production-like systems with rollback strategies, state-aware execution, and secure infrastructure practices.

Strong focus on system reliability, automation, and real-world problem solving.

”

TECHNICAL SKILLS :

Cloud: AWS (EC2, S3, IAM, RDS, Lambda, EventBridge, SSM)

CI/CD: Jenkins, GitHub Actions
Containers: Docker

Scripting: Bash, Python
Infra: Linux, Networking

Concepts: CI/CD, System Design, Failure Handling, Monitoring

Tools: Git, GitHub

SOFT SKILLS :

- Problem Solving & Debugging (IAM, SSM, Docker issues)
- System Thinking (end-to-end pipeline design)
- Failure Handling (rollback & recovery strategies)
- Ownership (built complete systems independently)
- Communication (clear explanation of systems & issues)
- Continuous Learning (DevOps tools & cloud practices)

ACHIEVEMENTS :

- Built and deployed a production-like CI/CD pipeline with automated rollback and failure handling
- Designed a state-aware AWS automation system reducing unnecessary EC2 runtime cost
- Implemented secure, IAM-based backup architecture (no hardcoded credentials)
- Debugged real-world cloud issues including IAM role misconfiguration and SSM failures
- Automated complete deployment and backup workflows with zero manual intervention
